

Installing 4EXT Recovery Touch

This is a guide how to install 4EXT Recovery Touch on your rooted phone.

I've used my HTC Desire Bravo GSM when making this guide, and cannot answer how this works on any other phones.

First of all; a big and huge Thanks to [madmaxx82](#) for making this incredible awesome recovery!

Without his effort maybe we still would be using volume up and down to find our way through the recovery.

If there is something needed added or edited to this guide, send me ([LarsChristian](#)) a PM on the XDA-Forums or on IRC.

IRC: For help and support or anything else you can find me or someone in the 4EXT Team on #4EXT on irc.freenode.net.

Before you start there are two requirements needed to use this app and recovery:

- Your phone needs to be rooted
- And it needs to be S-OFF.

How to do this you will find on the XDA-Forums.

For more information and features about this recovery you can find this here:

- <http://4ext.net/>
- <http://forum.xda-developers.com/showthread.php?t=1408936>

So you rooted your phone, and your current recovery is boring and does not support touch? Well, switch to 4EXT Recovery Touch! And this is how do it:

First you have 3 choices:

1. Go to <http://4ext.net> and download the free version
2. Or you can go to Android Market (Google Play) and support the development of this app.
https://play.google.com/store/apps/details?id=ext.recovery.control&feature=search_result
3. And you can also get it from SlideMe or AndroidPIT
<http://slideme.org/application/4ext-recovery-control>
<http://www.androidpit.com/en/android/market/apps/app/ext.recovery.control/4EXT-Recovery-Control>

1. Installing the App.

If you don't have bought the app from Android Market (Google Play) but downloaded it from 4EXT you will have to install the app manually. If you bought it, you can skip this part and go to '2. Using the App.'

If you bought the app from SlideMe/AndroidPIT you can use their app (find it on Android Market) to either download it direct to your phone (if so jump to 2. *Using the App*) or download to your computer (just continue for how to install it manually).

So now you have the 4EXTRecoverYUpdater.apk on your computer, right? Connect your phone to your computer. Use cable, FTP, Bluetooth or whatever you like best and put the 4EXTRecoverYUpdater.apk on the SD-Card.

Step one:	Step two:
Use a file manager of your own choice and find the 4EXTRecoverYUpdater.apk file on your SD-Card. I use File Manager that comes with MIUI.	Press on 4EXTRecoverYUpdater.apk to start the installation.
 <p>Here you see 4EXTRecoverYUpdater.apk</p>	 <p>And press <i>Install</i>. Now the app will be installed to your phone.</p>

Now you are done Installing the App.

2. Using the App

You are now ready to begin the process to install the recovery

Step one:	Step two:
<p>Okey, now you installed the app, right? If so u will see this icon in your launcher:</p>	<p>Since it's your first time starting the app it will ask you two questions. First accept or reject the Disclaimer. You know what to do here. The second question is if you want to go to the settings menu. This is up to you.</p> <p>Hope you're done in the settings menu and now you see this:</p>
 <p>Hit the app button to start!</p>	 <p>Hit <i>Online Install Upgrade</i></p>

Step three:

If it asks for superuser permissions, grant it! Then press '*Online Install | Upgrade*' again.

Now it will ask '*Am I allowed to connect to 4ext.ne...*' Check '*don't ask again*' and press Yes.

If some information about upgrading from RC3 and the 3ext folder comes up and the release of Recovery Control v2.2.1 press OK

Step Four:	Step Five:
-------------------	-------------------

Now it will ask you if it detected the right phone:

Now you will see this:

If it's your phone you can proceed, if not don't do it. If it's the right phone, press Yes.

The version highlighted in red is the newest version. The one in yellow (if you already have this recovery) is your current version installed. And the ones in blue are older versions.

Step Six:	Step Seven:
<p>Choose the latest version and then this will show up:</p>	<p>After you pressed <i>Install</i> on the last step, the app will do the rest of the job for you. Just grab some coke and wait for this:</p>
<div data-bbox="228 479 758 1296" data-label="Image"> </div> <p data-bbox="188 1373 339 1406">Press <i>Install</i>.</p>	<div data-bbox="863 479 1353 1285" data-label="Image"> </div> <p data-bbox="826 1366 1126 1400">Hit <i>OK</i> and you are done!</p>

You have now flashed 4EXT Recovery Touch! 😊
